What's New In File Generator (formerly Disk Tools)?

File Generator is a lightweight software solution designed to help you test the limits of your computer's hard disk with the help of a limited set of specialized tools. Small and portable application that does not require installation The first thing you need to know about this app is the fact that it is portable, which means that it does not create registry entries or other types of unwanted files on your system. Another advantage is the fact that you can take the app with you anywhere you go on a portable drive and use it on any computer straight out of the box. This app is quite useful for users who need to thoroughly test their computer's performance by creating stress conditions for the hard drive. Simple, but interesting set of features You can view how your OS handles large number of files and get an accurate reading about the read/write speed of your disk, as well as the burning and transfer speeds for CDs and DVDs. In addition, the app is well equipped to help you erase sensitive data from your hard drive and quickly merge files from any folder. There is, however, one more feature that makes it possible for you to view the free disk space via a vague

representation that only apparently does not display any measurable reading. To use this feature, you need to hover the cursor over each drive to get an accurate reading. Intuitive and straightforward hard disk testing app File Generator comes with a spartan and pragmatic interface with a minimum number of buttons and settings on display. From the main window, you can access the utility's features from the toolbar and by jumping from one tab to the other. Working with the tool is by no chance a difficult task, as everything is presented to you in the simplest and most straightforward form possible. This makes the program ideal for all categories of users, be they beginners or advanced. Streamlined app that is recommended for testing hard disks All in all, despite its basic looks, File Generator is an efficient application designed especially for users who want to test their computer's hard disk performance with just a few mouse clicks.
